FOREST CONTROL

NOV 22 1953

C & R-PAPER

CONTINUOUS INVENTORY

"Today I have grown taller from walking with the trees."

...Karle Wilson

Milwaukee, Wis. May, 1958 No. 50

TREES GROW TO MATURITY AND IF
NOT USED DECLINE AND DIE

Have you ever wondered what happens to the trees on your forest every hour of every day of every year? If you have, you might be interested in the following tree information secured from the Continuous Forest Inventory on the Minnesota & Ontario Paper Company's forest lands, based on a measurement covering a recent three-year period.

Every hour during the period, 170 trees grew into merchantable sizes, while 69 trees died of natural causes.

Every day 4,080 trees grew large enough for pulpwood, while 1,656 trees lost their life due to old age, disease, wind, sun, flood, insects, suppression, beaver or porcupine.

When each year was ended 1,489,200 trees had passed the 5.00" DBH mark and had joined their merchantable partners in the forest, while 604,440 unlucky trees had lost their battle for survival.

C.F.I. foresters -

HERE IS A QUICK
LOOK AT THE -

MANDO REMEASUREMENT

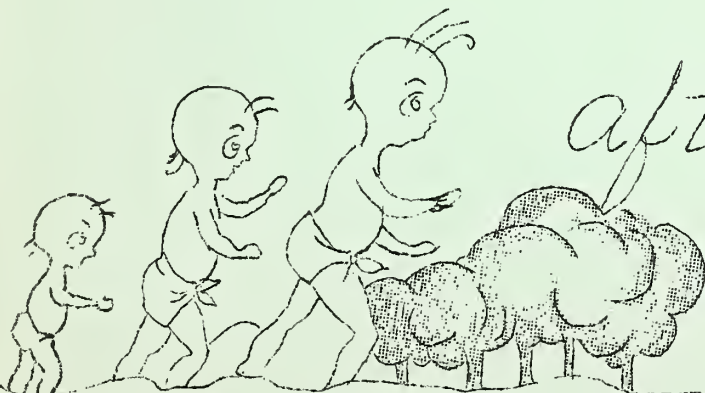

OF 749 $\frac{1}{4}$ ACRE
PLOTS.

ON

258,500 ACRES OF
FOREST IN NORTHERN
MINNESOTA.

after

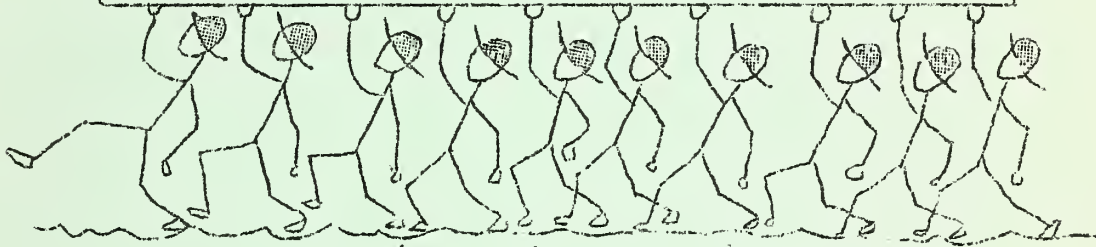

THREE GROWING SEASONS

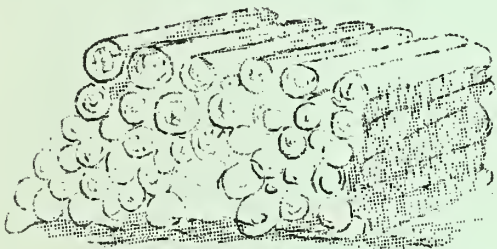

a C.F.I. job

WELL DONE IN 412
MAN-DAYS BY 10 MEN

who found that

MANDO FOREST GREW
339,000 CORDS OF
WOOD IN 3 YEARS

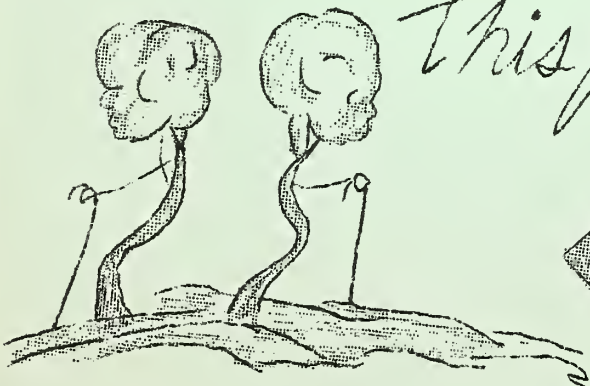

but

LIKE MOST LARGE WILD
AREAS IN THE
NORTH —

this forest

CONTAINED MANY
POOR OLD TREES

and so in three years

1,800,000 OF
THESE TREES
DIED —

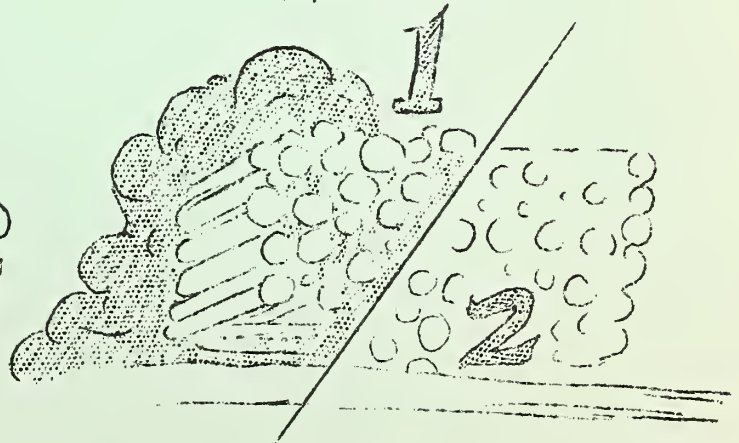

causing

MANDO FOREST TO
LOSE 163,000 CORDS
OF GOOD WOOD

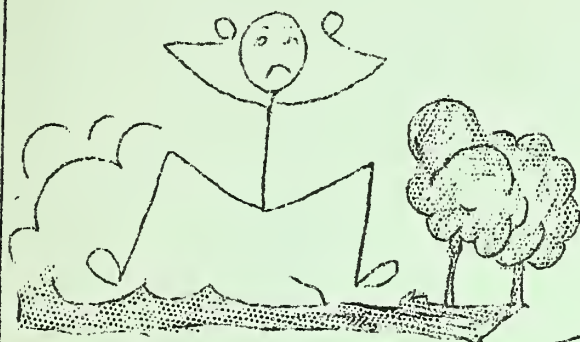

It's a startling fact that

$\frac{1}{2}$ OF MANDO'S
GROWTH WAS
COUNTERBALANCED
BY LOSS

but it is

AN EVEN MORE
SIGNIFICANT FACT

that

53% OF THIS
LOSS OCCURRED

on only

80,415 ACRES
CLASSIFIED AS
NO. 1 CUTTING
PERIOD IN 1953

but

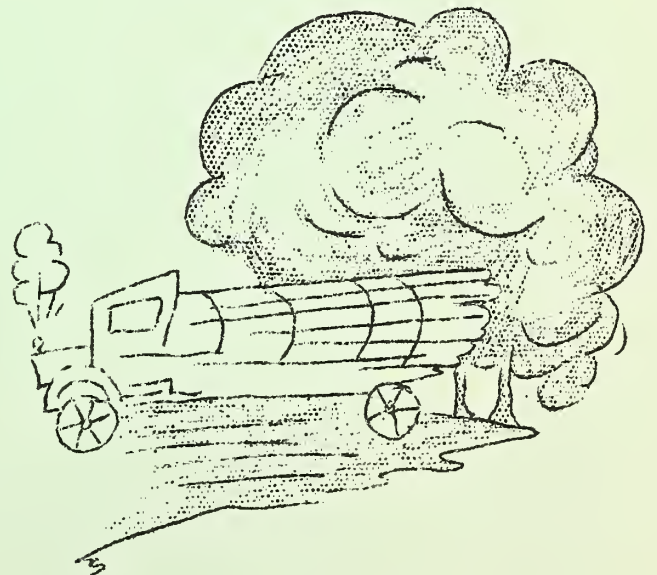

in 1953

MANDO PLANNED MORE
ROADS INTO THIS
FAR BACK-COUNTRY

and since then

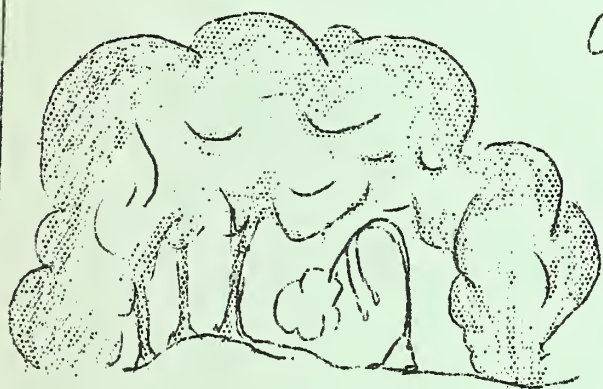

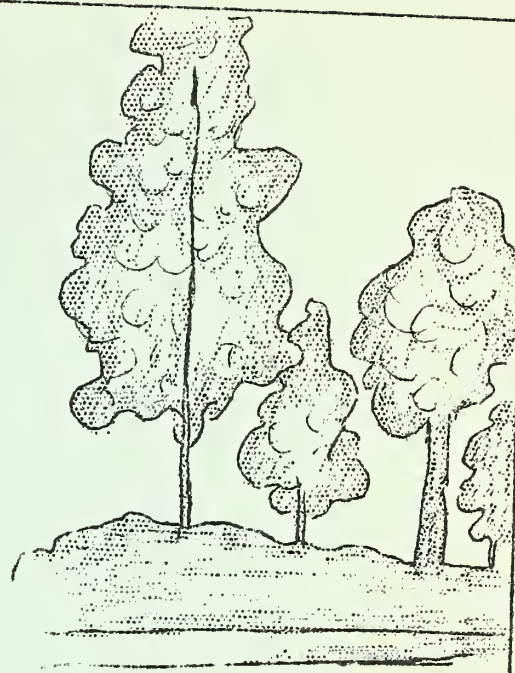

HAS CUT MORE THAN $\frac{3}{4}$
OF IT'S WOOD FROM
THESE AREAS.

once again C.F.I.
Pat mando

HAS INCREASED
FOREST GROWTH

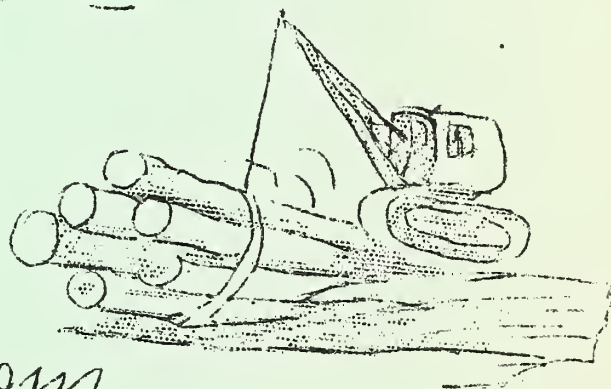

and

DECREASED FOREST
WASTE.
